

Matheus Pires - Front-end Developer

Passionate about software development. I have experience in the development of Single Page Applications (SPAs), RESTful-APIs and Mobile Applications with React Native, as well as project standardization and good programming practices. I am very analytical and demanding with my work, reflecting on constant evolution and helping to develop the skills of those around me.

Work Experience

numa | Front-end Engineer

Berlin, Germany - (Mar/2021 - today)

I helped numa build the next generation of their products, creating new features, applying new technologies and introducing best practices.

Shout out to the **Digital Check-in** project where I had the full ownership, architecting and developing new features such as document scanning and returning guest journey,

making the user journey easier, faster and with a better experience. The application was build with TypeScript, Next.js, TailwindCSS and React Query.

I also worked in other projects like the **Website** and **Trip Manager**, which we developed new features such as guest account and extend stay using Server Side Rendering and Static Site Generation. The application was build with TypeScript, Next.js, GraphQL and Styled Components.

Sambatech | Front-end Developer

Belo Horizonte, Brasil - (May/2020 - Mar/2021)

I helped build large scale web applications. These ranged from admin software to realtime video applications.

Notably, one of the projects I worked on for [Ambev](#) was very challenging. Together with internal front-end and back-end developers, I architected and developed a livestream platform with a lot of **realtime** features, such as chat, polls and exclusive discounts on other websites. The application was build with JavaScript, React and SWR.

I also worked on a project for [Porto Seguro](#), which we developed an education platform with a dashboard for helping people who have lost their jobs because of COVID.

Serafine Clothing | FullStack Developer

Pará de Minas, Brasil - (Ocr/2019 - May/2020)

I created an internal platform which enabled franchisees to improve their sales and how to better manage their stores. The application was build with React and Node.js.

I also contributed in UI improvements on the e-commerce, which made it more intuitive and attractive for customers to use. The technologies I used were HTML, CSS and JavaScript.

Skills

- **Front-end:** ReactJS, NextJS, Styled-Components, Tailwind CSS, Stitches, Radix-UI, HTML 5, CSS3, XState, React Hook Form, GraphQL;
- **Mobile:** React Native, Styled-Components, Context API, React Native Reanimated;
- **Back-end:** Node.js, NestJS, Express;

- **Databases:** PostgreSQL;
 - **Programming Languages:** JavaScript/TypeScript;
 - **Versioning Tools:** Git;
 - **Project Management:** Asana, Azure, Monday;
